SUBJECT: Enclosure 5 (Exercise Support Requirements) to V Corps Command Training Guidance for FY 05-06

1. Purpose. Provide planning guidance and task V Corps Major Subordinate Command (MSC) and Separate Brigade (Sep Bde) commanders with currently known or projected exercise support requirements for all FY 05 and FY 06 training exercises.

2. Objective. The primary objective of this annex is to maximize the predictability and stability of subordinate unit training and exercise support requirements. V Corps provides the most detailed and accurate exercise planning information available up to 12-24 months in advance of execution so that subordinate commanders and staffs have sufficient time to plan, budget for, resource and efficiently manage their exercise training programs. Secondary objective is to provide enough information now to permit subordinate units to identify significant exercise participation or support conflicts or issues so they may be raised to the V Corps Command Group and resolved in a timely manner.

3. General.

a. V Corps generally schedules, resources, and plans one major internally- controlled Command Post Exercise (CPX)/Computer Assisted Exercise (CAX) each fiscal year (e.g., Victory Focus series). This CPX serves as an internal V Corps collective training event, controlled by CG, V Corps, in preparation for either a Corps/division embedded or a single division Battle Command Training Program (BCTP) Warfighter Exercise (WFX) or operational Mission Rehearsal Exercise (MRX). Most other exercises listed in this enclosure are in support of other army, service component, NATO, bilateral country, Partnership for Peace (PfP) or engagement exercise training objectives. USAREUR identifies, prioritizes and validates exercise support personnel and equipment requirements for each of these other exercises, then directs V Corps to support these requirements.

b. V Corps G3 Exercise Division receives and validates these requirements, then, analyzes them for optimal and equitable subordinate unit sourcing and tasking. G3 Exercise Division coordinates with the appropriate V Corps staff Subject Matter Experts, Battlefield Operating System (BOS) representatives, AG (for current and projected personnel strength distribution), G3 Training (for projected CMTC and GTA density support impacts), G3 Operations Division (for tasking cycle validation and equitable tasking distribution) and the affected subordinate units or staff to develop a draft V Corps exercise TASKORD. After staffing and coordination with affected units/staffs, V Corps G3 Exercise Division obtains the G3 or Command Group approval IAW the V Corps Tasking regulation guidelines and publishes V Corps TASKORDs. V Corps G3 publishes FRAGOs as new USAREUR-validated and V Corps Commander-validated support requirements develop or change.

c. Units tasked to participate in most exercises below are also required to participate in one or more of the pre-exercise planning events below with unit representative(s) as appropriate or specified. A typical exercise planning cycle will include some or all of the following events: a U.S.-only Pre-Concept Development Conference (CDC) at Exercise minus 16-19 months, a CDC at Exercise minus 15-18 months, an Initial Planning Conference (IPC) at Exercise minus 10-12 months, a Main Planning Conference (MPC) at Exercise minus 4-8 months, a Leader's Reconnaissance and or Site Survey at Exercise minus 3-6 months, a Final Planning Conference (FPC) at Exercise minus 2-3 months, a Final Coordination Meeting at Exercise minus 15-45 days, and simulation controller (puckster) and/or Observer Controller (O/C) training and mini-exercise at Exercise minus 2-15 days. Units will generally be required to participate in the CDC, IPC, MPC and FPC with from one to four personnel/BOS representatives: G3/S3 Operations or Training - (provides training objectives, validates manning requirements, participates in training

concept development and validation, identifies and raises exercise support concerns or issues, represents unit commander); G4/S4 - develops, validates Logistics support and/or Life Support concept and requirements; G6/SIGO - develops and validates communications architecture or simulations support requirements; and an exercise-specific BOS representative (ADA, Eng, G2/S2, G5/S5, CHEMA, etc.) as appropriate.

4. Specific. The V Corps FY 05-06 Exercise Programs will support USAREUR-validated Contingency Operations, Army, joint and combined war fighting and where possible, engagement of other allied armies in this theater. Exercises in this program include V Corps exercises and Echelons Above Corps exercises sponsored by United States European Command (USEUCOM), Central Command/Army Central Command (CENTCOM/ARCENT), United States Army, Europe, and 7th Army (USAREUR), Allied Command Europe (ACE) Rapid Reaction Corps (ARRC), and NATO Joint Headquarters Centre (JHQ-C), as well as USEUCOM-sponsored, USAREUR-validated emerging partner bilateral exercises. All exercises support taskings in this annex appear in order of beginning execution date sequence.

5. Summary. Participation in all scheduled exercises has been validated and approved by CG, V Corps. Pending Department of the Army decisions may significantly impact of the accuracy of the information contained in this annex.
